COMPANY
PROFILE

IT System Audit, Review and Assessment

IT audit constitutes an assessment of IT system management, its alignment to corporate management, vision, mission and organizational goals.

The goal of IT system audit, review and assessment?

- Systematize, improve and integrate business procedures and the coverage of business information in the information system
- Identify risks and weaknesses, thus enabling the definition of solutions for introducing controls over processes supported by IT
- Accelerate the business information collection process
- Centralize the control system and eliminate bottlenecks in information flow through the IS Regulatory compliance
- Ensure information confidentiality, integrity and availability

Approach:

- Assessment of controls over critical system platforms, network and physical components, IT infrastructure supporting relevant business processes.
- Testing logical and physical security controls, IT operations, Disaster recovery procedures thus ensuring business continuity.

Results:

- Reliable IT controls and risk management capability
- Enabling security information management
- Improved data availability and integrity
- Long-term savings which lead to revenue growth
